Project/activity list

The project or activity list contains in detail the information that would overload a CV. This compilation includes all the necessary information for assessing your knowledge and experience and is mainly studied in the area of expertise. The personnel decision-maker is not likely to read this document.

Attention should be paid to the following points:

The key words that are important for your application (if possible from the company/organisation's job advertisement) must be present in the text and can be highlighted there if necessary. If you are applying for an SAP BW position, the terms "SAP" and "BW" must appear in this text - preferably several times.

- The projects or activities should be listed backwards chronologically and in blocks (the backwards chronological order is recommended in order to have the most important information at first glance).

- For each project, all technical and/or professional content is described in bullet points. Refrain from long narrative texts; these are read less often.

- - If you have managed teams or projects, mention approximately how many people you have managed. If you have had budgetary responsibility, give a rough estimate of the size of the project or cost centre budget for which you were responsible.

- If you have development skills, mention in which components you have developed (e.g. in SAP BW, SAP SD/ MM, SAP HR or SAP XI/PI).

An exemplary project list can be found in the appendix.
